Preserving the
Tree of Life

PRESERVING THE LIFELINE FOR YOUR FUTURE

Bank Your Stem Cells Today

STEM CELL BANKING PROCESSES Here is How Stem Cell Processing and Cryopreservation Works At Stem Med

1. Contact Us

Speak with our friendly consultant to gain a complete understanding of stem cell banking.

2. Health Screening & Blood Test

Undergo a health assessment and a blood test to ensure that you are suitable to extract and store your stem cells.

3. Stem Cell Harvesting

Bone Marrow (BM) or Adipose (fat) Tissue Harvesting will be performed by your appointed physician.

4. Pickup & Transportation

Stem Med will collect the harvested BM/fat from the respective facility and deliver it to Stem Med Cellular Laboratory.

5. Cryopreservation Of Stem Cells

Your BM/fat will be processed & extracted to be cryopreserved in vapour-phase liquid nitrogen. This process is done in an ISO 5 Cleanroom laboratory.

6. Storage In Cryo Bags / Vials

The stem cells will be stored in cryo bags/vials which will be frozen systematically (-1°C at a time) in cryopreservation solution.

7. Lab Reports

You will receive your reports on the actual quantity and viability of the stored stem cells.

ABOUT US Who is Stem Med?

Stem Med is an adult stem cell bank based in Singapore licensed by the Ministry of Health to process, cryopreserve and store Bone Marrow and Peripheral Blood Stem Cells. Incorporated since 2015, Stem Med offers stem cell banking services to facilitate future therapeutic use and is currently evaluating the feasibility of using Mesenchymal Stem Cells (MSCs) in regenerative medicine in its new cellular laboratory equipped with ISO 5 cleanrooms.
